Working From Home with the Redbird Mathematics

We are excited to inform you that your child currently has a student account for Redbird Mathematics. This account was obtained through their academic institution. Redbird Math is a K-7 web based mathematics curricula developed at Stanford University. Students may use Redbird Math from any location with an internet connection and a modern device.

We hope that you will encourage your child to utilize Redbird Mathematics at home. We strongly recommend that students work independently on Redbird Math. The program is adaptive and therefore individualized for each student. The student is constantly being assessed and the rate at which a student advances is contingent on their patterns of response. Once a student demonstrates that they are proficient on the content being presented they will then have the opportunity to experience new mathematical concepts.

Redbird Math has tools embedded within each lesson that are there to assist your child with any questions they may have about the course structure or any concepts they may not completely understand. It would be helpful if you could become familiar with these tools and periodically remind your child that these features are always available. If you notice that your child seems to be struggling with specific areas, please let their teacher know so that they can offer assistance in the classroom. You have the ability to monitor your child's progress via the "View My Progress" feature. This may be accessed from the student's Unit Home Page. We hope that your child enjoys using Redbird Math.
