

We at Spalding believe that our students, as inhabitants of the 21st century global community, must strive to be responsible and respectful digital citizens. Access to our information-rich digital society demands that our students be able to safely, effectively, and ethically use all of the digital tools at their disposal. Here at Spalding, we will provide a quality digital citizenship education to all students so they can make wise and informed decisions when using technology, both at school and at home.

We will do this using the curriculum provided by Common Sense Media, the preeminent champion for digital citizenship among school-age children. We will provide instruction to every child at Spalding in grades K-5, as well as provide parents with access to resources which they can use at home to supplement Spalding's instruction.

Spalding is committed to making sure that our students are well equipped to survive and prosper in the current digital age, and becoming a Digital Citizenship Certified School will help us in reaching this goal. If you would like to see the many valuable resources available through Common Sense Media, please visit their website at CommonSenseMedia.org.
